14 pages including 3 Annexes which form an integral part of this Assessment

European Assessment Document EAD 280016-00-0602 "Products for installation systems for supporting technical building equipment" This European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

Specific Part

1 Technical description of the product

This European Technical Assessment covers HILTI channel connectors of MT System: MT-TL M8, MT-TL M8 OC, MT-TL M10, MT-TL M10 OC, MT-TL M12, MT-TL M12 OC, MT-TL M16, MT-TL M16 OC and MT-TFB OC.

MT-TL M8, MT-TL M8 OC, MT-TL M10, MT-TL M10 OC, MT-TL M12, MT-TL M12 OC, MT-TL M16 and MT-TL M16 OC channel connectors consist of a steel bolt, nut made of steel and plate (winged section) made of polyamid. The nut has a centered round opening for bolt. Bolts of MT-TL M8, MT-TL M8 OC, MT-TL M10, MT-TL M10 OC, MT-TL M12, MT-TL M12 OC, MT-TL M16 and MT-TL M16 OC channel connectors are given in Table 3. MT-TFB OC is a thread forming bolt with integrated plate made of steel with torx screw drive.

The drawings, dimensions and materials of the HILTI channel connectors of MT System are given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document (EAD)

The performances given in clause 3 are only valid if HILTI channel connectors of MT System are in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the HILTI channel connectors of MT System of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer or Technical Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

In accordance with the European Assessment Document EAD 280016-00-0602, the products are intended to be used under dry indoor conditions for supporting:

- pipes for the transport of water not intended for human consumption,
- pipes for the transport of gas/fuel intended for the supply of building heating/cooling systems,
- technical building equipment in general.

3 Performance of the product and references to the methods used for its assessment

3.1 Performance of the product

3.1.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Pull-out resistance under fire exposure	No performance assessed
Shear resistance under fire exposure	No performance assessed

3.1.2 Safety and accessibility in use (BWR 4)

Essential characteristic	Performance
Shape	Annex A
Dimensions	Annex A
Material	Annex A
Characteristic pull-out resistance	Annex C
Characteristic shear resistance	Annex C

3.2 Methods used for the assessment

The assessment has been made in accordance with EAD 280016-00-0602.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

For products for installation systems to be used for supporting pipes for the transport of water not intended for human consumption, according to the Decision 1999/472/EC of the European Commission, amended by the Decision 2001/596/EC, the system 4 of assessment and verification of constancy of performance (see Annex V to the regulation (EU) No 305/2011) applies.

For products for installation systems intended to be used for supporting pipes for the transport of gas/fuel intended for the supply of building heating/cooling systems, according to the Decision 1999/472/EC of the European Commission, amended by the Decision 2001/596/EC, the system 3 of assessment and verification of constancy of performance (see Annex V to the regulation (EU) No 305/2011) applies.

For products for installation systems intended to be used for supporting technical building equipment in general according to the Decision 97/161/EC of the European Commission, the system 2+ of assessment and verification of constancy of performance (see Annex V to the regulation (EU) No 305/2011) applies.

5 Technical details necessary for the implementation of the AVCP system, as provided in the applicable European Assessment Document (EAD)

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited in Instytut Techniki Budowlanej.

For the type testing the results of the tests performed as part of the assessment for the European Technical Assessment shall be used unless there are changes in the production line or plant. In such cases the necessary type testing has to be agreed between Instytut Techniki Budowlanej and the notified body.

Issued in Warsaw on 30/12/2021 by Instytut Techniki Budowlanej

Anna Panek, MSc Deputy Director of ITB

Specification of intended use

- The HILTI channel connectors MT-TL M8, MT-TL M8 OC, MT-TL M10, MT-TL M10 OC, MT-TL M12, MT-TL M12 OC, MT-TL M16, MT-TL M16 OC and MT-TFB OC are used to transfer the loads of building services components such as ducts and equipment for water, heating, cooling, ventilation, electrical and other installations at ambient temperature.
- The HILTI channel connectors are suitable for undertaking this load-bearing function under the conditions described in Section 2 of this European Technical Assessment.
- The resistance of HILTI channel connectors set down in Annexes C1 ÷ C3 applies for static actions in the direction of the main axes Y, Z (Figure C3.1 and Figure C3.2) in connection with HILTI installation channels of MT System acc. to ETA-21/0414, HILTI base connectors of MT System acc. to ETA-21/1045 and HILTI angle connectors of MT System acc. to ETA-21/1046 and Table B2.
- The nuts of MT-TL M8, MT-TL M8 OC, MT-TL M10, MT-TL M10 OC, MT-TL M12, MT-TL M12 OC, MT-TL M16 and MT-TL M16 OC are connected to the installation channel and the connection components by tightening an appropriate bolt acc. to Table B2.
- MT-TFB OC is used to screw together installation channels and attached angle connectors or base connectors by screwing them together through the appropriate openings of these components.
- The torque and geometry of channel connectors are shown in Table B2.

HILTI o	channel connectors of M	T System	Annex B2

- The required torque may be applied with electrical or non-electrical devices.
- HILTI installation channels according to ETA-21/0414 used in combination with HILTI channel connectors are cut to length centrally between the longholes or the roundholes at the installation channel marking.
- Prior to installation, it must be ensured, the installation channel, the connection components, the fastening of the connectors to the base material and the base material itself, due to the load of the components to be supported, are suitable to withstand the resistance values of the channel connectors.
- The channel connectors must be installed by appropriately qualified personnel and under the supervision of the site manager. The general installation instructions of the manufacturer apply.

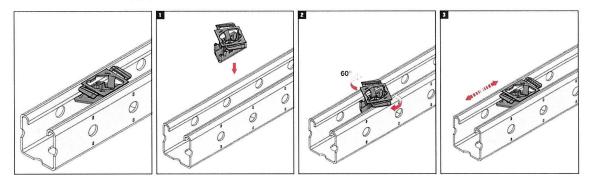

Figure B3.1: Installation instruction for HILTI channel connectors MT-TL M8, MT-TL M10, MT-TL M12, MT-TL M16, MT-TL M8 OC, MT-TL M10 OC, MT-TL M12 OC and MT-TL M16 OC

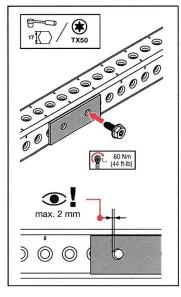

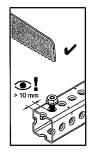

Figure B3.2: Installation instruction for HILTI channel connector MT-TFB OC

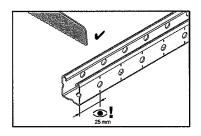

HILTI channel connectors of MT System

Intended use Installation instruction (1) Annex B3

• For closed installation channels the distance between the end of the profile and start of the round hole has to be minimum 10 mm.

• For open installation channels the distance between the end of the profile and center of the first round hole has to be minimum 25 mm.
